

About Centranex

Centranex is a strategic business information exchange solution that revolutionizes document-based process automation and business communications.

Centranex automates the exchange of critical business documents between customers, business partners, and suppliers regardless of source, format or destination. It has been built on trust-based network which empowers users to exchange business documents in an authentic way and enables cash-flow improvement locked within conventional business communication. It also offers the flexibility of integrating with ERP systems by facilitating multi channel communications across the partners, with special focus on data integrity and security.

Developed by Versant Technologies, India's leading offshore-onsite technology partner for Oracle Retail Practice, Electronic Data Interchange (EDI). Centranex is the centralized business information management solution for your electronic business communication needs.

To experience a well defined, next generation intelligent business information exchange process with your partners, suppliers and collaborators, switch to Centranex today.

Product Features

- **First of its kind solution available in Indian market**
A unique and innovative solution introduced in India, Centranex helps meet the critical data exchange needs between customers, business partners, and suppliers regardless of source, format or destination.
- **Integration with in-house ERP system and 3rd party ERP systems like SAP & Oracle**
Centranex provides multi-channel delivery, receipt, and workflow capabilities for ERP applications like SAP and Oracle.
- **Workflow Enablement**
Centranex enables users to create a rule that directs the flow of the document through an organization. It also saves money and streamlines business processes by automating document delivery, receipt, workflow, and storage as compared to manual processes.
- **Indexing and Searching**
Centranex helps to track electronic documents and facilitates faster retrieval by allowing you to specify partial search terms involving the document identifier and/or parts of the expected metadata.
- **MIS Reporting**
Centranex features like formatting, overlays and integrated crystal reports help to easily customize existing documents. This enhances communication, and aids systematic reporting and management of information.
- **Application Administration**
Centranex empowers clients to expand business net work by giving the flexibility to create new business users and their trading profiles. It leverages and simplifies existing IT infrastructure by using a single, scalable, tightly integrated platform that would otherwise take several solutions from multiple vendors to achieve.
- **Data Export and Import**
Centranex facilitates easy import and export of price, inventory and sales data from and into the system. This helps to eliminate the high cost and wasted time associated with manual delivery of documents from business applications.

Whom it Helps

▶ Large, Medium or Small Organisation

Whether you are a large, medium or small organization, Centranex is ideal for facilitating easy business information exchange between you and your customers, business partners, and suppliers. Unlike traditional EDI solutions Centranex easily eliminates the need for capital-intensive hardware, software and maintenance of EDI infrastructure. It takes care of all the technical aspects of setting up and testing trading partners so that you can concentrate on your core business functions.

▶ Trading Partner

Centranex acts like a hub connecting various trading-partners. Being a multi faceted, web-based EDI solution it is capable of exchanging documents such as purchase orders, invoices, ship notices, order changes, etc. You can Add/Edit/Delete your own Trading partner and assign their roles in no time and track their performance continuously. Also by tracking reporting it ensures better decision making capabilities.

▶ Supplier Distributor Network

For manufacturing firms with a big supplier-distributor network, Centranex helps the distributor network have better and continuous control to what is happening to their products in the down line. Since the entire process is automated it helps to track how products are moving in the process. Moreover, manual entry of invoices is completely eliminated, thereby reducing the risk of errors. From suppliers' point of view too Centranex is very useful by keeping track of when exactly the goods will arrive in their area.

Versant Technologies - Company behind Centranex
